Previous Interview Experience

Company Name: Goldman Sachs

Role: Software Development Engineer

Interview Process

Round 1: Online Assessment

The first round includes a mix of easy and medium-level coding questions.

Focuses on problem-solving skills and coding proficiency.

Round 2: CoderPad Interview

The interview takes place via CoderPad.

Candidates are asked to explain the approach before coding, followed by a discussion on time and space complexity.

Focuses on real-time coding and efficient problem-solving.

Round 3: Software Engineering Practices

Focuses on software engineering principles and solving real-world problems.

Topics include concurrency, system failures, and ensuring customer experience.

Tests the ability to apply solutions to real-world engineering challenges.

Round 4: Software Design and Architecture

Focus is on system design.

Candidates are asked to design a solution to a real-world problem, considering edge cases and failure scenarios.

Round 5: Hiring Manager Interview

Behavioral and motivational interview with the Hiring Manager.

The manager asks questions about career goals, motivation, and fit within the company culture.

Candidates discuss recent projects and how their experience aligns with the role at Goldman Sachs.

Focus is on understanding expectations and long-term career goals within the company.

Note:

The questions asked in interview rounds aren't fixed and may vary each time. We're sharing these with you to help you get an idea of what to expect and to better understand the interview environment.
