Company Name: Amazon

Role: Software Development Engineer Intern

Interview Process

Coding Question +40 MCQ

Coding question

Interview

Coding Question: The problem was related to graph and tree-based algorithms with an easy to medium level of difficulty.

40 MCQs: These were centered on CS fundamentals, including topics like:

- Linux commands.
- Data structures and algorithms.
- Networking concepts.
- Software testing methodologies.
- Pseudo code analysis.

The interview : It consisted of two medium level DSA-focused questions related to priority queue and HashMap where the primary evaluation was on my problem-solving approach and how I structured my solutions.

Note:

The questions asked in interview rounds aren't fixed and may vary each time. We're sharing these with you to help you get an idea of what to expect and to better understand the interview environment.
